

Science at St Joseph's

Our vision: Science should stimulate and excite our children's curiosity about the world around them and give them the knowledge and tools they need to explore and investigate it.

Our 6 Science Principles:

Children build upon previous knowledge through engaging and informative Science lessons

Children study a diverse range of inspirational scientists who have shaped our world

Children work both independently and cooperatively in lessons

Children develop a range of scientific skills through practical enquiries.

Children use scientific vocabulary to explain their knowledge

Children ask questions and discuss concepts to develop their critical thinking and understanding
